

Frozen JEPA controllers under literature-aligned evaluation

Evaluation only—no RL fine-tuning. Blue bars are this work (100 episodes per task).

Ours: 95% episode-level CI. Literature whiskers: variability reported by each source. AntMaze and Fetch use the Gymnasium-Robotics ports (v4); literature anchors use D4RL v2 and Fetch-v1, respectively. UMaze ours uses a map-distilled discrete router. See benchmark_protocol.md for supervision and version caveats.
